| <b>Effective Date</b> | 29 August 2026                                         |
| <b>Operator</b>       | Duru Naz Akkaya and Yigit Efe Karabulut - Milan, Italy |

This Cookie Policy explains how Tripivor uses cookies and similar technologies on tripivor.com during its private beta. It should be read together with the Tripivor Privacy Policy & GDPR Notice. This Policy applies to the website, account and authentication flows, AI travel-planning interface, saved itineraries and related beta functionality.

### 1. Who We Are

Tripivor is a pre-incorporation private beta operated jointly by Duru Naz Akkaya and Yigit Efe Karabulut from Milan, Italy. Contact: [info@tripivor.com](mailto:info@tripivor.com). Website: <https://tripivor.com>.

### 2. What Cookies and Similar Technologies Are

Cookies are small text files stored on or accessed from a user device. Similar technologies may include local storage, session storage, software development kits, pixels and comparable identifiers. These technologies may be used to maintain sessions, authenticate users, remember choices, secure the Service, display maps and, where the user has consented, measure use of the beta.

### 3. Categories Used by Tripivor

#### 3.1 Strictly Necessary Technologies

Tripivor may use strictly necessary technologies to provide functions expressly requested by the user, including account authentication, email/password login, Google Sign-In, session management, security, fraud or abuse prevention, load balancing and storage of privacy choices. These technologies are not used for advertising and, where permitted by applicable law, do not require optional consent because the requested service cannot operate properly without them.

#### 3.2 Analytics Technologies

Tripivor uses Google Analytics to understand how invited beta users interact with the Service, identify technical or usability issues and improve the beta. Analytics may involve device/browser information, page and feature interactions, session information, referral information and approximate network-derived information. Where consent is required, Google Analytics will remain disabled until the user affirmatively accepts analytics technologies.

#### 3.3 Google Sign-In and Google Maps

Tripivor may use Google Sign-In for authentication and Google Maps for mapping and location-display functionality. These services may use or access storage technologies necessary to provide their functionality and may process technical information in accordance with Google's applicable terms and privacy documentation. Tripivor does not use Google Maps to request continuous live GPS access during the current beta.

### 3.4 Advertising and Profiling

Tripivor does not currently use advertising cookies, cross-site behavioural advertising pixels or third-party advertising profiles as part of the private beta. If this changes, this Policy and the consent interface will be updated before such technologies are activated.

## 4. Consent and Your Choices

Where required by applicable law, non-essential analytics technologies are disabled by default. The cookie interface must offer a genuine choice to accept analytics, reject optional technologies or manage preferences. Refusing optional analytics does not prevent ordinary use of the Tripivor beta. Users may change or withdraw their optional choices at any time through the Cookie Settings control made available on the website.

## 5. Current Technology Register

| Provider / Technology                          | Purpose                                                 | Category                                          | Activation                                        | Typical Duration / Control                           |
|------------------------------------------------|---------------------------------------------------------|---------------------------------------------------|---------------------------------------------------|------------------------------------------------------|
| Supabase authentication / session technologies | Account authentication, session and security            | Strictly necessary                                | As required for requested account functions       | Session or configuration-dependent                   |
| Google Sign-In                                 | Google account authentication                           | Strictly necessary when user chooses Google login | When the user selects Google Sign-In              | Google-controlled / configuration-dependent          |
| Google Analytics                               | Beta usage measurement and product improvement          | Analytics - optional                              | Only after applicable analytics consent           | Configured by Tripivor and Google Analytics settings |
| Google Maps                                    | Display maps and location-related itinerary information | Functional / service-related                      | When mapping functionality is requested or loaded | Google-controlled / configuration-dependent          |
| Tripivor privacy-choice storage                | Remember cookie/consent preferences                     | Strictly necessary                                | After a privacy choice is made                    | For the period needed to remember the choice         |

## 6. Third-Party Travel Websites

When a user follows a link from Tripivor to Booking.com, Skyscanner, Hotels.com, Uber or another independent provider, the destination service may set its own cookies or similar technologies. Those technologies are controlled by the relevant third party and are governed by that third party's own privacy and cookie information. Tripivor does not control cookies placed after the user leaves Tripivor.

## 7. Changes to this Policy

Tripivor may update this Cookie Policy where technologies, providers, legal requirements or beta functionality change. The effective date at the top of this document identifies the current version. Material changes will be reflected on the website or otherwise communicated where appropriate.

## 8. Contact

Questions about cookies, tracking or privacy may be sent to [info@tripivor.com](mailto:info@tripivor.com).

Implementation note: the categories above describe the technologies intentionally used for the beta. Tripivor will keep the live cookie configuration aligned with this Policy and will update the register if the production deployment introduces additional storage or tracking technologies.
